

Summary of the 2021/22 University of Oxford Admissions Process for the subjects; Mathematics, Mathematics & Statistics, Mathematics & Philosophy, and Mathematics & Computer Science

These data refer to applicants in the “2021/22 cycle” who applied in 2021 for the Oxford course starting in 2022 or in 2023 (deferred entry). All figures in brackets relate to the previous admissions cycle, 2020/21.

Overall Application Statistics

Course	Applications	Shortlisted	Offers
Mathematics	1877 (1848)	558 (605)	187 (189)
Mathematics and Statistics	205 (261)	37 (47)	8 (10)
Mathematics and Philosophy	151 (158)	51 (70)	19 (20)
Mathematics and Computer Science	636 (603)	141 (134)	65 (60)
Total	2869 (2870)	787 (856)	279 (279)

- 19.4% of applications made were open applications (19.2%).
- 33 applicants applied for deferred entry (28). Of these, 9 were interviewed and 4 were offered places.
- 29.3% of applicants were female (32.5%) and 28.3% of those offered a place are female (29.0%).
- 1494 applicants were studying A-levels in the UK (1469). Of these, 93% were taking Further Mathematics as a full A-level. Of the 101 applicants studying A-levels in the UK who weren't taking Further Maths as a full A-level, 7 were shortlisted for interview, and fewer than 3 were offered a place.
- There were 1168 non-EU international-fee-paying applicants (1123).

The admissions criteria are published on the department's website at:

www.maths.ox.ac.uk/study-here/prospective-undergraduates/how-apply/admissions-criteria.

Mathematics Admissions Test

All applicants are expected to sit the Mathematics Admissions Test (MAT), or must seek permission in exceptional circumstances from the subject Admissions Coordinator to be exempted from the test. In 2021 the test date was 03 November. In this cycle, 2816 applicants successfully registered for and sat the MAT (2808).

Nine applicants who, due to exceptional circumstances, either failed to register for the test or could not sit the test, were invited to take a separate mathematics test after shortlisting. Others who failed to register or who did not sit the test – and did not have exceptional circumstances – were notified that their application was no longer under consideration.

Details relating to the MAT, including several past and specimen papers, can be found at:

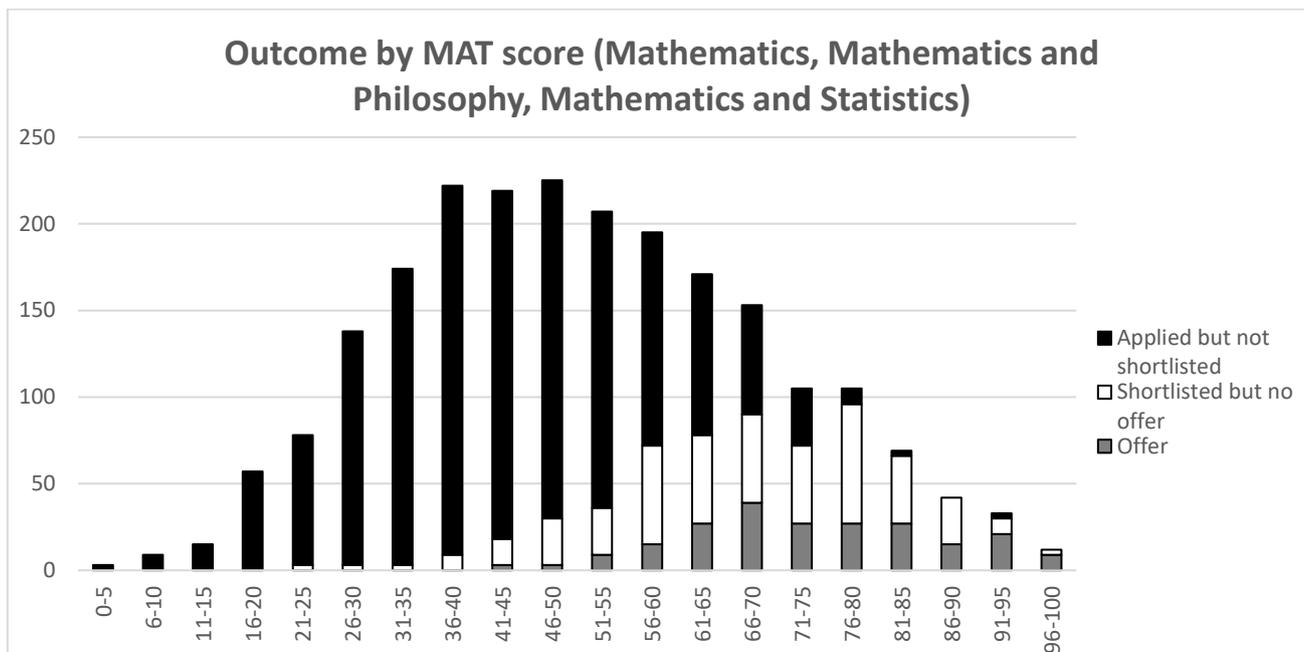

<https://www.maths.ox.ac.uk/study-here/undergraduate-study/maths-admissions-test>

The average score for Oxford applicants answering questions 1, 2, 3, 4, and 5 was:

- 51.1 (57.9) amongst all applicants;
- 69.5 (75.2) amongst shortlisted applicants;
- 73.5 (81.7) amongst successful applicants.

The average score for Oxford applicants answering questions 1, 2, 3, 5, and 6 was:

- 46.9 (60.0) amongst all applicants;
- 69.9 (82.3) amongst shortlisted applicants;
- 74.3 (87.5) amongst successful applicants.

This chart excludes applicants who did not sit the MAT, and the numbers have been rounded.

Shortlisting

In light of the competition for places, the purpose of shortlisting is to provide time during the December interview window to interview all shortlisted applicants.

Shortlisting is performed in accordance with the stated admissions criteria on the basis of all currently available and relevant data: in particular these data include an applicant's score from the MAT, all aspects of the applicant's UCAS form and any further relevant contextual data specific to the application.

As guidance, the Admissions Coordinator advises college tutors as to an upper threshold score and a lower threshold score. All candidates above the upper threshold were recommended to be shortlisted, and candidates below the lower threshold were recommended not to be shortlisted, except in the case of exceptional circumstances. Around half of the candidates between the two thresholds were shortlisted for interview, resulting in around 3 applicants per place.

Throughout the process all UCAS forms, test scores, contextual information, comments, and interview grades are easily accessible to all college tutors involved with admissions via a web-based database.

College tutors review the UCAS forms and any other information relevant to individual applications, and in light of all information enter their provisional shortlisting decisions in the web-based admissions database. In light of further information a college may reverse the default shortlisting decision, making known the reasons for their decision to the Admissions Coordinator. Provisional shortlisting decisions become final by an agreed deadline unless appealed by another college or the Admissions Coordinator. Letters and/or emails are then sent to candidates informing them of the outcome of the shortlisting exercise.

Interview Stage

Each applicant has a first-assigned college, which is either the college to which they applied or, in the case of open applications, a college randomly assigned by the University Admissions Office in such a way as to even out the number of applicants per place across colleges. Each shortlisted applicant is also randomly assigned a second college by an algorithm aiming to equalise across colleges the interview load per place ratio.

In cases where a college is particularly over-subscribed (more than four shortlisted applicants per place), a college must reallocate a fraction of their candidates. These candidates are then assigned at random to other colleges. In this admissions cycle, five candidates were reallocated to a different first college.

In December 2021 all interviews were carried out remotely. Most applicants were given interviews by at least two different colleges (their first- and second-assigned colleges). Applicants may also have been interviewed by other colleges. Applicants to joint degrees typically have separate interviews in the two disciplines.

Interviews are academic in nature. An applicant's performance is judged according to the admissions criteria and graded on a scale of 1-9 against agreed descriptors. The score and any comments are added to the shared web-based database.

Decisions

The Admissions Group operates various procedures in a coordinated effort to ensure that the strongest applicants are admitted to the University irrespective of college choice; these include transparency of all test results, interview grades, and UCAS forms amongst all tutors involved with admissions, and a final meeting of tutors at which the strongest unplaced applicants are collectively discussed and open offers are made by the Admissions Group. Around 24% of offers (28%) made in this cycle were either open offers or made by a college other than the first college considering the applicant.

Colleges may make offers conditional on the Opportunity Oxford bridging programme to eligible students who would not otherwise have been admitted. In this cycle, 18 such offers were made for Maths or joint honours courses. More information on this programme is available at: www.ox.ac.uk/opportunityoxford.

Decisions are deemed to be official at the end of the Group's final meeting and the shortlisted applications are assigned a final overall grade. These decisions are then conveyed by tutors to their respective college offices for dissemination to shortlisted applicants. The Admissions Group has standard offers for those taking A-levels, the International Baccalaureate or Advanced Highers; college tutors will seek advice from admissions tutors or the Admissions Office in making other offers.

Feedback

All candidates for Maths, Maths & Statistics, Maths & Philosophy who took the MAT, and who have not withdrawn, will have their MAT score emailed to them automatically by the Admissions Coordinator at the end of the admissions process. Similarly, the Computer Science department will send out MAT scores to Maths & Computer Science applicants.

Other feedback will not automatically be sent out, but applicants may seek feedback from their first-assigned colleges about any aspect of the admissions process. Feedback will not usually be sent out until the new year, once the admissions process is complete.
