Toy Models

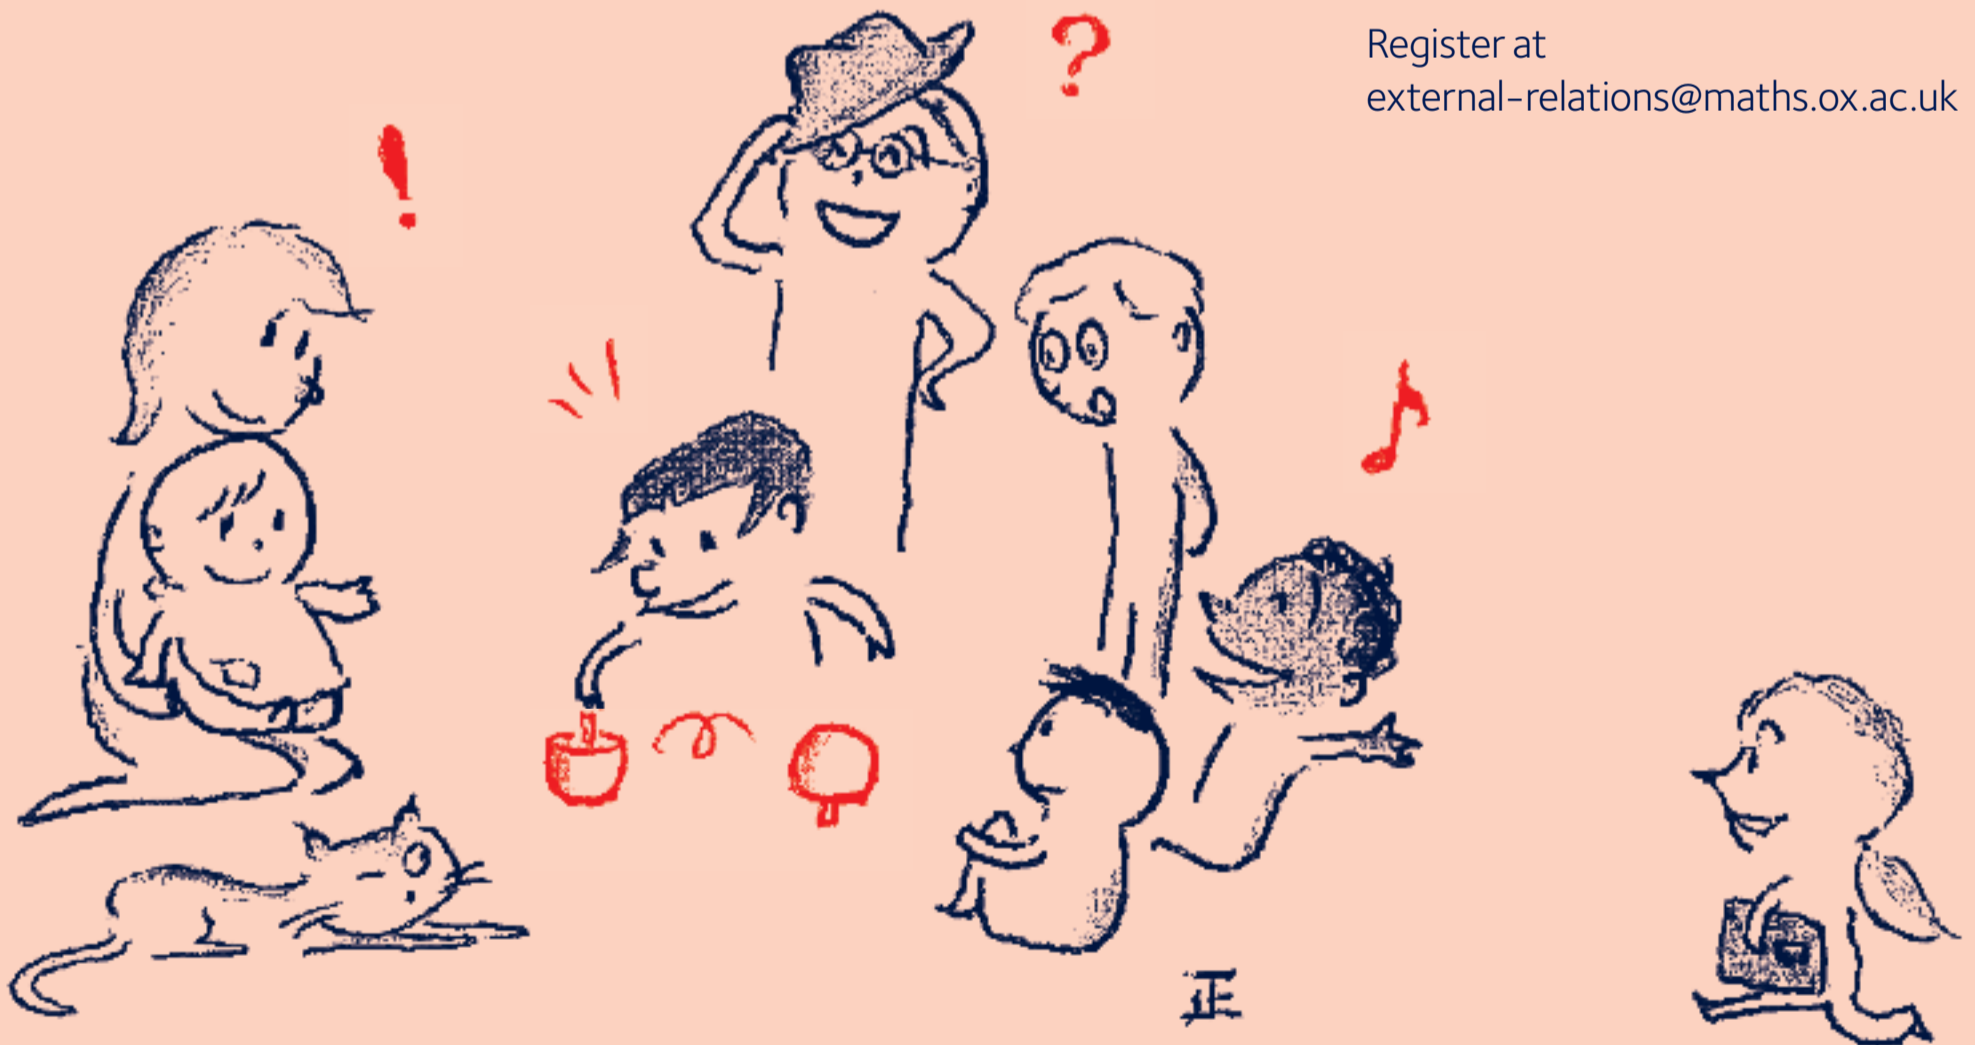

Would you like to come
and see some toys?

'Toys' here have a special sense: objects of daily life which you can find or make in minutes, yet which, if played with imaginatively reveal surprises that keep scientists puzzling for a while. You will see table-top demos of many such toys and visit some of the science that they open up.

Tadashi Tokieda is the Director of Studies in Mathematics at Trinity Hall, Cambridge and the Poincare Professor in the Department of Mathematics, Stanford.

5–6pm – Lecture Theatre 1
Mathematical Institute, Oxford
