

Statistics related(?)

- Code

- code is best included in an appendix, not in the main body of the dissertation

- if you've written a lot of code, it's a good idea to explain briefly what you did

- maybe mention this briefly in the signpost section of the intro, then explain a bit more in the chapter that needs the code - flagging that your code (or extracts of your code) is in an appendix

- if you mainly used standard packages/libraries, good idea to indicate that, and say what you used

- Numerical results
 - think about how to present numerical results
 - output should probably be formatted appropriately, not direct cut-and-paste
 - and edited down to the parts you need, not everything R (or other) gives you
 - give results to a sensible number of decimal places

- Figures

- not too big

- not too small, the text in figures should be about the same size as the main text, maybe a little smaller (but not too small to read)

May need to be selective about which plots to include, which tables of results to include
